## Senior Web Developer & UI Designer

Experienced Senior Developer and UI Designer with a passion for building intuitive, responsive, and highly optimized websites that load fast and create a better user experience. Bringing forth expertise in all stages of website creation, including research, planning, design, development, testing, deployment, and maintenance. Able to effectively work independently or collaborate in a team setting.

# EMPLOYMENT

### Senior Web Developer & UI Designer
**Uptown Studios (2021 - Present)**

- Work independently and collaboratively with a team to develop UI/UX workflows
- Create sitemaps, wireframes, user flow diagrams, and prototypes
- Turn prototypes into intuitive websites built with WordPress
- Create consistency between the back end and front end by developing Gutenberg blocks
- Build custom themes and plugins to meet client needs
- Build responsive designs for mobile, tablet, and desktop computers
- Optimize websites and implement SEO strategies to improve site performance and increase search engine traffic
- Write maintainable, efficient, and secure code using the best practices in web development
- Identify and resolve website issues

### Full Stack Web Developer
**Self-Employed (2009 - 2021)**

- Collaborate with clients to gather business requirements, create concepts, control project flow, and ensure deliverables are completed on time
- Ensure client needs are met by managing all stages of website creation
- Create sitemaps, wireframes, user flow diagrams, and prototypes
- Build custom WordPress themes and plugins to meet client needs
- Optimize websites and implement SEO strategies
- Write maintainable, efficient, and secure code using the best practices in web development
- Maintain website security to prevent unauthorized access to data, applications, and devices
- Identify and resolve website issues
- Add additional features to enhance user experience or improve existing features

### Web Developer & Database Administrator
**Diocese of Sacramento (2000 - 2021)**

- Plan, design, develop, test, and maintain company websites
- Setup database configurations and maintain system security
- Create SQL queries and data extractions to analyze data and report findings
- Write support documentation for internal and external use
- Train and supervise data processing staff
- Stay up-to-date on emerging technologies

# EDUCATION

### Bachelor of Science in Web Development (2020)
Bellevue University (GPA: 4.0)

### Associates of Computer Information Science (2011)
Sacramento City College (GPA: 3.9)
